Modes of E-Payment

- Payment Cards
- Electronic Cash
- Check free
- Check share
- Internet Cash
- Wallet
- Smart Card

Advantages of Electronic Payment Systems

- 1. Time savings.** Money transfer between virtual accounts usually **takes a few minutes**, while a postal one may take **several days**. Also, you will **not waste** your time **waiting in lines** at a bank or post office.
- 2. Expenses control.** The virtual account contains the **history of all transactions** indicating the store and the amount you spent. And you can **check it anytime** you want.
- 3. Reduced risk of loss and theft.** You can not forget your **virtual wallet** somewhere and it can not be taken away by robbers.
- 4. Convenience.** All the transfers can be performed at **any time, any where**. It's enough to have an access to the Internet. This enabled to sell and buy products or services through online i.e. convenient for **Online Sales**.
- 5. Low Labour Costs.** Since online payments are usually **automatic**, they have lower costs than manual payment methods such as cheque, money order, cash and so on.

Disadvantages of Electronic payment system

1. **Restrictions.** Each payment system has its **limits** regarding the **maximum amount** in the account, the **number of transactions per day** and the amount of output.
2. **The risk of being hacked.** Cyber criminals can hack the online payment methods to steal people's money or information. If you **follow** the **security rules** the **threat** is **minimal**, it can be compared to the risk of something like a robbery.
3. **The lack of anonymity.** The information about all the transactions, including the amount, time and recipient are **stored in the database of the payment system**. And it means the intelligence agency has an access to this information.
4. **The necessity of Internet access.** If **Internet** connection **fails**, you can not get to the online account.
5. **Service Fee.** Payment gateways and third party payment processors charge service fees.
